Profile

B.Tech Computer Science Engineering student with a strong interest in Web Development and Blockchain Technology. Passionate about building secure systems, solving real-world problems, and understanding how technologies work under the hood. Curious, self-driven, and eager to learn emerging technologies while developing impactful software solutions.

Skills

Languages: C, C++, JavaScript, Rust, Solidity

Web Technologies: HTML, CSS, React.js, TypeScript, Node.js, Express.js

Blockchain: Ethereum, Smart Contracts, ethers.js, Remix IDE

Tools: Git, GitHub, VS Code

Core Concepts: Data Structures and Algorithms, Object-Oriented Programming (OOP), Problem Solving

Education

SRM University AP

2025 – 2029

Bachelor of Technology (B.Tech) in Computer Science and Engineering

KLE IPC

Class XII – 81%

Good Shepherd Central School

Class X – 81%

Projects

ChainProof – Trustless Bug Bounty Platform

Solidity, Node.js, Express.js, ethers.js v6, Docker, IPFS, Ethereum Sepolia

- Built a decentralized zero-trust bug bounty platform eliminating centralized control over exploit verification and reward distribution.
- Developed Solidity smart contracts to securely escrow ETH rewards and automate on-chain payouts after successful exploit verification.
- Implemented AES-256 encrypted vulnerability report submission using IPFS for confidential and tamper-resistant storage.
- Engineered an autonomous Docker-based exploit verification pipeline capable of securely validating submissions before triggering smart contract execution.
- Integrated ethers.js v6 to enable seamless blockchain interaction while removing dependence on centralized fund custody and verification.

Aegis Robotics – Zero-Shot Imitation Learning for Humanoid Robots

Python, TensorFlow, Multimodal LLMs, Computer Vision

- Developed a zero-shot imitation learning pipeline enabling humanoid robots to learn tasks directly from user-provided video demonstrations.
- Integrated multimodal Large Language Models to generate executable robot motion plans from visual inputs.
- Built a local TensorFlow-based safety classifier to detect and prevent unsafe robot behaviors before execution.
- Designed an intuitive programming workflow combining AI-generated motion planning with real-time safety validation for reliable human-robot interaction.

Achievements

- Won **1st Prize** at the **X³ Hackathon** organized by AWS Cloud Club SRM AP.
- Secured **2nd Runner-Up** at the **BlockForge Mini Hackathon** organized by Team1 Blockchain and Hackshastra.
- Won a **Ledger Hardware Wallet** at **HackPrix** organized by Lord's Institute of Science and Technology.

Interests

Web Development • Blockchain • Open Source • Coding • Cricket • Badminton
